

What is a Short-term International Student?

1. The conditions of an eligible applicant

(1) A student has to be nominated by a university which has a partnership agreement with the Graduate School of Science and Technology, Keio University.

<https://www.st.keio.ac.jp/en/students/ic/exchange.html>

(2) A student has to be enrolled in a partner university during his/her whole enrolment period at Keio. He/she has to be in the **graduate level (Master)** by the beginning of the enrolment period at Keio.

2. What will a Short-term International Student do at Keio?

As a short-term international student, you will need to choose one of the three programs below.

(1) **Research based Program:** You will perform a research project at your preferred laboratory supervised by a faculty member. **Note that 2 credits will be given as 'INDEPENDENT STUDY FOR EXCHANGE STUDENT'.**

(2) **Research and Courses Program:** In addition to performing a research project, you can take some relevant courses.

(3) **Courses focused Program:** You will take some lecture courses. (7 courses per week at minimum)

If you choose (1) or (2), you need to find your academic supervisor at Keio upon application.

 **Please note that academic supervisors at Keio do NOT guide to write or evaluate your Thesis. They can only support your research related to your Thesis.**

3. How to find your academic supervisor at Keio

(1) Please check our faculty members on the website below.

<https://www.st.keio.ac.jp/en/tprofile/>

(2) Find a staff who is qualified as a Thesis Adviser.

Staffs who are qualified as a thesis adviser are those who can supervise your research.

You can find this information at the bottom of each staff's page.

(3) When you send an email to one of the staffs, please include all the following information:

- a. You have already been nominated as an exchange student from the partner university with Keio.
- b. Your CV (and transcripts if possible) to present your skills, strengths and achievements.
- c. Your research plan at Keio, and reason why you want to conduct research at his/her laboratory by explaining what research you have been doing (or you are interested in).
- d. Do not send your email to plural professors at one time. You must prioritise them, and ask one by one.

4. How to determine the topic of your research project

Discuss about your research topic and plan with your prospective supervisor via email (or skype or any other mean) before applying for a Short-term International Student.

The way of doing such research projects is mostly based on students' initiative. Thus please understand that the supervisors will not give detailed instructions on how the project will be going on, but only give topics, problems, and some environment for doing such research project. This means that students need to make a schedule, plan, process, etc. for the project mostly by themselves.
