

Commemorative Symposium

for the 20th Anniversary of
the Double Degree Program in Keio

NOV | 5 - 6 | 2025

Looking Ahead to the Brain Circulation Ecosystem in 2040

Since 2005, the beginning of the master's double degree program with the Ecole Centrale group in France, the Faculty and the Graduate School of Science and Technology at Keio University have developed a number of double degree programs with higher educational institutions in several other European countries. Today, we have master's double degree programs with a total of seventeen schools from France, Germany, Italy, Belgium, Sweden, Spain, and Poland. As we celebrate the 20th anniversary of our double degree program, we will hold a commemorative symposium to trace the history of the program, as well as discussing the future of double degree programs and joint programs in global society, with the prospect of a brain circulation ecosystem. This symposium aims to serve our three stakeholders: society, educational institutions, and students.
